SEO

SEO is a custom program that begins with keyword recommendations based on current search rank and number of active monthly searches. We provide our clients with an on-site analysis, a 30-point checklist and a benchmark ranking report. These become the target areas for improvement. Each month we'll provide a report to show how your search rank is improving against the benchmark rank.

Programmatic

Programmatic Display is a data-driven online marketing program that works on three principles: site retargeting, search targeting and contextual targeting. If internet users have been to your website, searched for your products and services or they're reading content relevant to what you offer, we'll help get your message in front of them. All campaigns are geo-targeted and geo-fencing is optional. Your campaign is optimized to target users who are likely to engage with your brand and purchase your products and services.

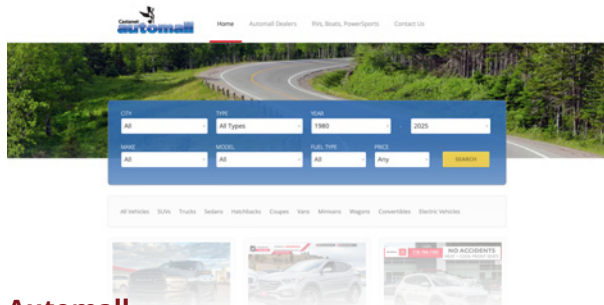

SEM

SEM is a form of internet marketing that involves the promotion of websites by increasing their visibility in search engine results pages primarily through paid search campaigns. Paid search campaigns direct traffic to your website and can target potential customers based on criteria such as their location, age, interests, browsing devices, etc. Monthly reports show activity such as impressions, click-through rates and lead generation.
